

# Latine and Black youth live in neighborhoods with the least access to green space

Percent of impervious land cover in Los Angeles County

Indicator: Impervious surfaces, mainly asphalt and concrete, don't allow water to seep into the ground. Instead, water flows into a storm drain or nearby body of water picking up pollutants in the process. These surfaces contribute to heat in urban areas and cause heat stresses in warm seasons. Race Note: AIAN=American Indian or Alaska Native; NHPI=Native Hawaiian or Pacific Islander; Another Race=Persons who identify with a racial group not presented. Data Source: Catalyst California's calculations of Multi-Resolution Land Characteristics Consortium, National Land Cover Database data and Census 2020 youth population estimates.
