

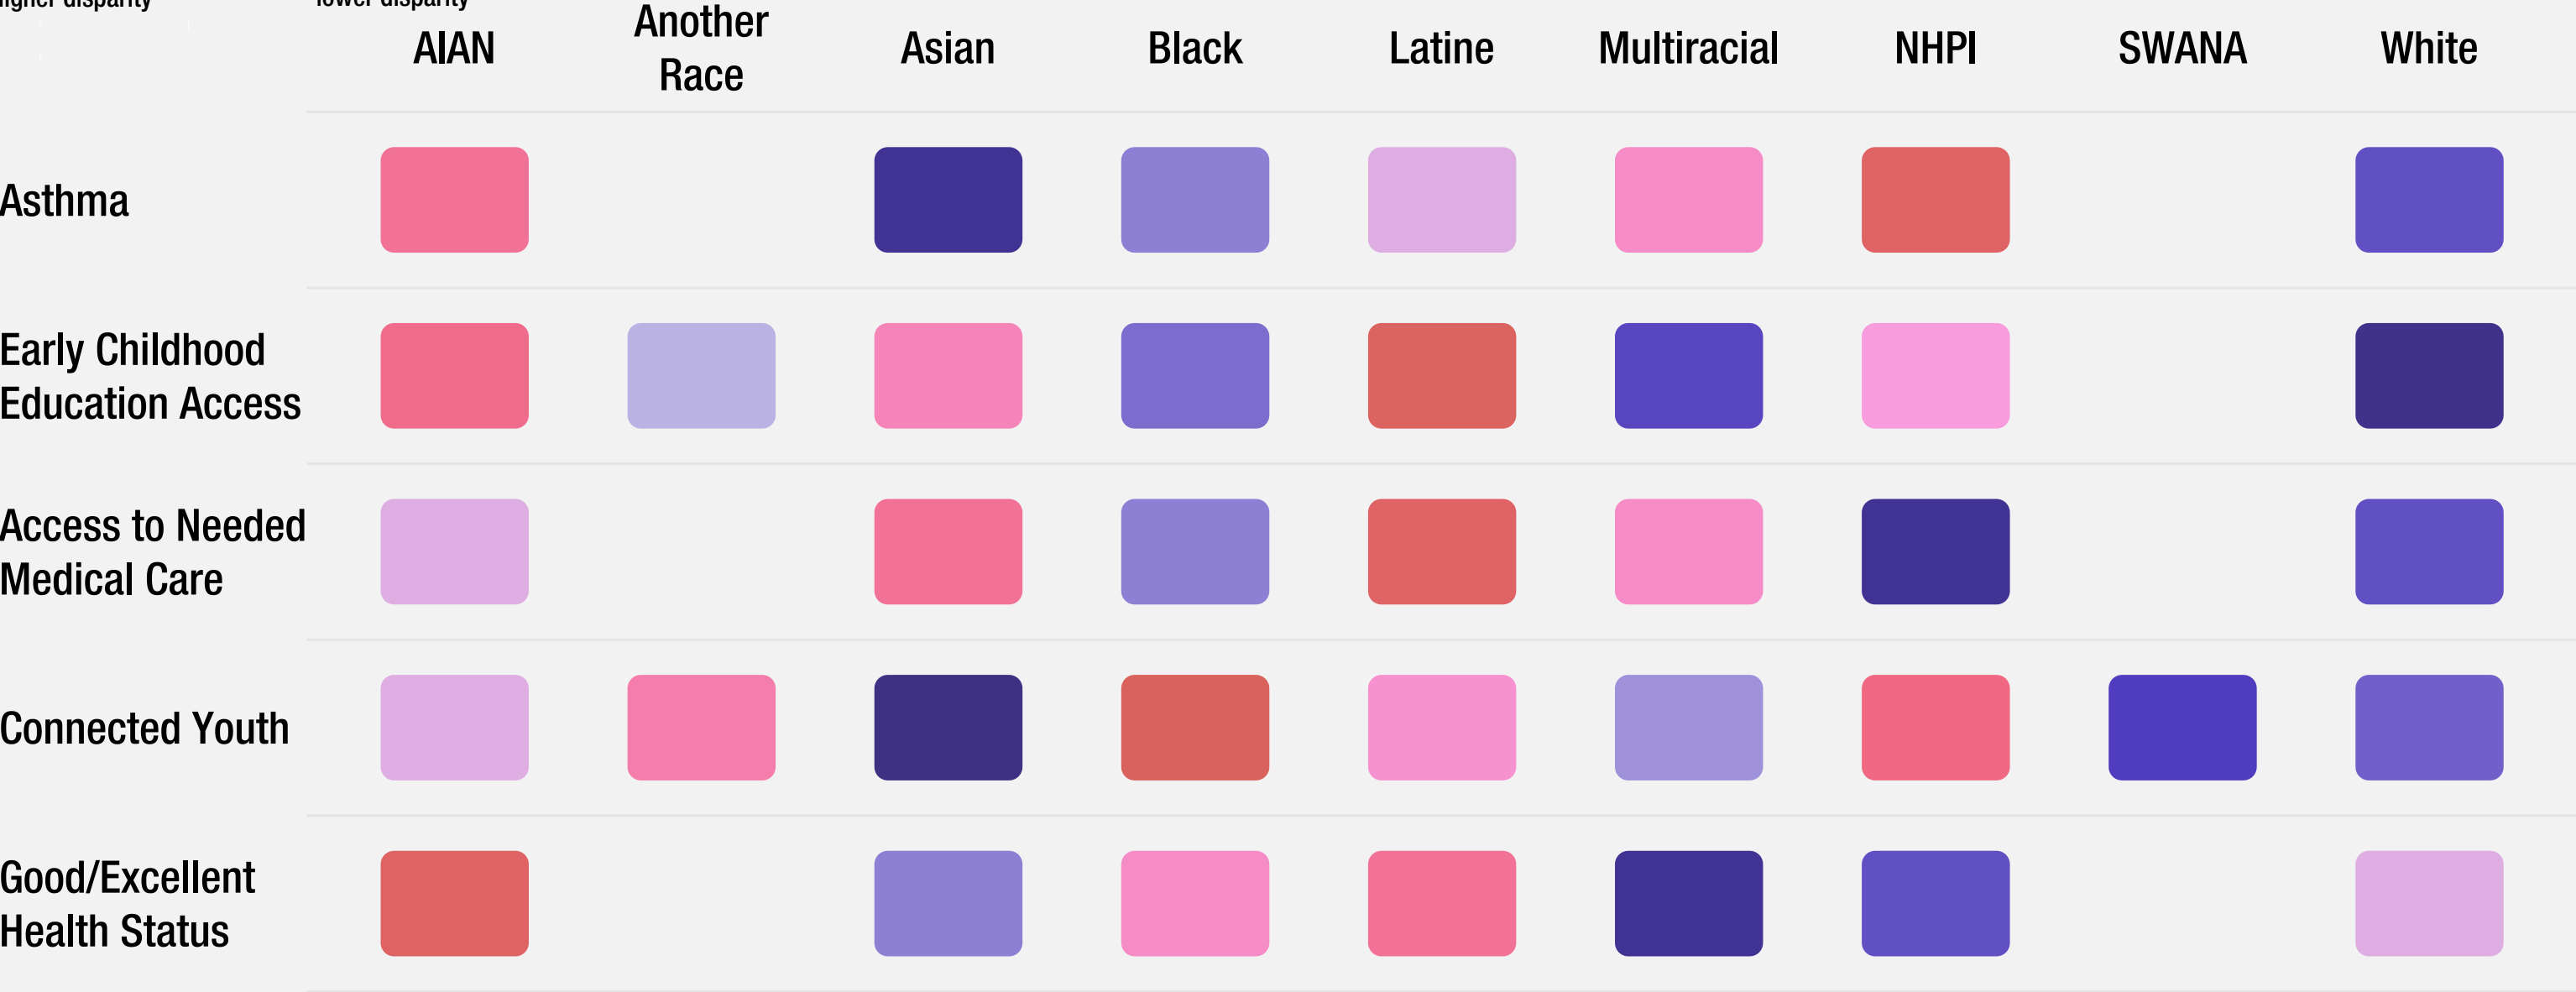

Mapping racial disparity across positive youth development systems in LA County

Latine youth experience high levels of disparity in ECE access and access to needed medical care.

The color of the square shows how different youth outcomes are for each indicator. Groups with **darker blue squares** have better outcomes and smaller differences from the group with the best rate. Groups with **darker pink squares** have greater disparities from the group with the best rate. Blank squares show which groups are missing data.

Race Note: AIAN=American Indian and Alaskan Native; NHPI=Native Hawaiian or Pacific Islander; SWANA=Southwest Asian or North African/Middle Eastern or North African
Asthma rates for AIAN and NHPI youth are unstable. See boldvisionla.org for definitions and methodology.
