

# Youth in South and East LA experience the highest percentile rates of pollution exposure around sensitive land uses

**Indicator:** Pollution exposure around sensitive land uses (defined as parks, family childcare homes, early childcare centers, and schools) is the average pollution burden percentile (%ile) for youth (ages 0-24 years old). A higher percentile indicates higher exposure to pollution. Data Source: Catalyst California's calculations of GreenInfo Network's California Protected Areas (2023a) & School Campus (2021) Databases, California Community Care Licensing Division (2023), and California OEHHA CalEnviroScreen 4.0 (2021).
